

dcode

# Drones are cheap. The threat is evolving rapidly. The acquisition system isn't.

Dcode works with government teams to close that gap. Our embedded experts deliver the tech strategy/scouting, acquisition creativity, and last-mile-to-the-field expertise needed to accelerate Counter-Unmanned Aerial System (C-UAS) acquisition—within a strategic framework that makes sense for the buyer and the operator.

# Why This Matters **Now.**

## Mission Priority

Department of Defense (DoD) leadership is making C-UAS a top priority in FY26 and beyond

## Operational Demand

The operational tempo demands more than tech demos—it requires **integrated capability** across CONOPS, policy, logistics, and more

## Urgency

The timeline of tech fielding must match the timeline of threat evolution

## Dcode's Approach

Dcode partners with DoD organizations to unify C-UAS acquisition efforts—building executable strategies, stakeholder cohesion, and modular delivery frameworks. Whether you're coordinating across an entire service or within one program, we help align capability to mission impact, not just budget lines or buzzwords.

## What We Deliver

**Mission-focused strategy development** across policy, operations, and S&T

**Capability alignment** that prioritizes tech with the highest potential mission impact

**Technology evaluation and prioritization frameworks** that reduce risk and delay

**Execution models** that support rapid technology fielding, sustainment, and ongoing scaling

### Why Dcode

- Embedded expertise in both government acquisition strategy and commercial tech integration
- Deep experience navigating intra-service complexity with a view toward interoperability
- Proven models that work within current authorities, but allow for future adaptation

### Outcomes We Drive

- Faster decision-making and clearer ownership of tradeoffs
- Reduced acquisition cycles with tech evaluation methods that scale
- Operationally relevant capability prioritization—not tech-first, but mission-first

# C-UAS Is Just the Beginning

Dcode’s framework applies to any quickly evolving mission, responding with agility to rapidly evolving threat environments and specific capability requirements. Dcode helps DoD acquisition leaders accelerate procurement pathways, scout and field tech better to make smarter C-UAS investments, and deliver real mission advantage.
